Highlights of our Learning Platform

eBooks

Inside each course's eBook subject material is broken down into manageable, smaller units. Each topic may include diagrams, graphs, or animated videos to provide visual reinforcement or demonstration of a concept.

Self - Assessments

Quizzes provide students a quick summary of what they have learned about a specific topic. This immediate feedback identifies, in more detail, the topics that need to be revisited prior to moving on to the next concept.

Adaptive Assessments & Formative Updates

Much like a video game, our adaptive assessments are geared to help students "climb the ladder of competency". In order to progress from one assessment to another, students must successfully score a predetermined number of points to open the next assessment.

Progress Reports

Periodic personalized progress reports provide each student with detailed analysis of their course work. Information includes: how much time has been spent reviewing the content, assessment and quiz results, and strengths and weaknesses.
